

Introduction: Education is being changed often. In the past we used textbooks, but now tablets which have been used in work, and businesses everywhere could be used in schools. This debate will change education forever. Tablets though are the better option because they have many much more features than textbooks.

Body Paragraph 1: In this debate against tablets or textbooks in schools, tablets have more benefits than textbooks. An example of this is how tablets can be used for other things besides school. For example, "We use them to communicate with friends, to organize our lives, and to learn and find new information". Tablets have many more purposes besides school which can help people outside of school. "Opportunity for students to learn how to use computers for the rest of their lives".(text 2) This shows that tablets teach students how to use computers which they will more than likely use until the day they die. To sum it up, tablets can update to new changes instantly and teach students how to use computers while a textbook is just reading a book.

Body Paragraph 2: In the debate of textbooks and tablets, tablets include more benefits than textbooks. One of these benefits is how tablets update instantly while textbooks never can update. For example, "Textbooks can sometimes have outdated information if the latest edition isn't available". This shows that textbooks easily become outdated and will more than likely be left behind. For example, "Computer-based lessons are updated in real-time" and that the tablets "find most accurate and updated information". (text 2). This shows how tablets can update to any changed others make instantly while textbooks are going to be left behind because you have to buy more textbooks often for them to update to today.

Counterargument: A common misunderstanding is how people think textbooks are much better than tablets for school. However, in reality tablets can be used for much more things outside of school, and the online textbooks can update quickly. For example, others say "Print textbooks can not freeze, crash or get hacked". At the same time, textbooks can be easily ruined by people spilling drinks on them. Also, people say that tablets have an "average battery life of a tablet is 7.26 hours, which is close to the length of a school day". Schools who use tablets can easily have extra chargers in their classrooms so if a tablet is low on battery teachers can charge it. In the end, tablets are much better than textbooks because textbooks can be ruined easily, and tablets can be easily charged if they are almost dead.

Conclusion: The way kids learn about things is really important but should change. Tablets can update to new ideas instantly, meanwhile for textbooks to "update" you would have to buy a new textbook. Tablets are important for kids to learn how to use as they are used in work and businesses around the world. Textbooks can easily be ruined. Tablets can be used when being

charged so they can not die until you unplug them. Tablets should replace textbooks because reading a book won't teach how to use tablets or computers at work.
