

Introduction:there is so much to argue about with tablets and textbook clearly tablets are much better because kids you devices non stop at home so they know how to use the device and it's much easier way to connect with school

Body Paragraph 1:kids tend to zone out while reading in a book the loose track of where they left off and they have trouble reading the words because it tends to be to small but on a tablet you can zoom in on the words so you can read it better kids also don't zone out as much while on the tablets because the light from the device is shining and you can't lose your space when you turn it off because you can power the device back on and it brings you right where you left off

Body Paragraph 2: another upside of using tablets is how kids can connect with the device and school at the same time because they use games and tablets and phones at home so they already use it and paper and pencil can get really boring so using tablets motivates them more

Counterargument:

Conclusion:

Tablets are much more useful rather than textbooks and thats what im going to be talking in my essay today i'm going to prove my point a

kids tend to zone out while reading in a book the loose track of where they left off and they have trouble reading the words because it tends to be to small but on a tablet you can zoom in on the words so you can read it better kids also don't zone out as much while on the tablets because the light from the device is shining and you can't lose your space when you turn it off because you can power the device back on and it brings you right where you left off

another upside of using tablets is how kids can connect with the device and school at the same time because they use games and tablets and phones at home so they already use it and paper and pencil can get really boring so using tablets motivates them more

This proves tablets are more useful than textbooks, not a lot of kids can work with textbooks kids would rather use tablets and have fun with stuff they do on a daily basis
