

Introduction: The world of education is ever-evolving. Tablets are a widely used electronic device that can be seen as a useful tool in the classroom. Many people argue that tablets should replace textbooks completely in K-12 schools. Others think that there are too many issues with this new technology and that the switch to tablets would be problematic. It is evident that this topic has much to debate when considering the evidence presented. Ultimately, tablets should replace textbooks in classrooms because they will help students access more updated information.

Body Paragraph 1: Recently there has been the question of, should tablets replace textbooks. Not only can tablets replace textbooks but they can hold any book or school work the student may need. In the text, "should textbooks be replaced by notebook computers?", it states "computer based lesson plans are updated in real time.". Since lessons can be updated in real-time, students will always get the latest information. "Textbooks can sometimes have outdated information when the latest version isn't available." says Oxford learning.

Body Paragraph 2: Since students are already using technology, like phones computers, and tablets, teachers should use them in class. Students are already very familiar with the technology so it makes sense to use it. In text three states, "The biggest challenge is that they're (kids) growing up as digital natives". Kids grow up with technology which will make it easier for them to use them in class

Counterargument: While some people may say that tablets are an interruption in class. In actuality, tablets and other technological devices are a crucial factor in student's life. For example, text 3 states that "computers are important". Students use technology every day, whether it's their personal cell phone or tablet. Ultimately, using tablets in schools will benefit students because they are already very familiar with them.

Conclusion: The universe of education is truly advancing. Tablets are a widely utilized electronic device that is a useful tool in the classroom. Numerous individuals argue that tablets ought to replace textbooks totally in K-12 schools. Others feel that there is an excessive number of issues with this new innovation and that the change to tablets would be too complex. It is obvious that this theme has a lot to discuss while considering the proof introduced. Eventually, tablets should replace textbooks in classrooms since they will help students access refreshed and precise data unlike the information textbooks provide.
